EDUCATION

Computer Engineering

Vishwakarma institute of Information Technology, Pune

08/2018 - 08/2022

9.04 CGPA

WORK EXPERIENCE

Software Engineer

Persistent Systems Ltd

06/2022 - 11/2024

Pune

Achievements/Tasks

- Streamlined day-to-day operations: by creating **workflow rules**, **approval processes**, and process builders to enhance business efficiency.
- UI Enhancements: Developed **Lightning Web Components (LWC)** for various screen elements within Salesforce flow, significantly improving the user interface and workflow execution.
- Engineered **Apex Triggers**: Built Apex triggers with **handler classes** to automate business logic, enforce data consistency, and drive system automation.
- Complex Apex Logic: Implemented complex Apex logic to handle bulk data processing and integrate with external systems using asynchronous methods such as **Batch Apex** and **Queueable Apex**.
- Experienced in using **Data Loader** for bulk data operations, including importing, exporting, updating, and deleting records. Skilled in field mapping, data transformations, error handling, and data migration.
- Experienced in integrating Salesforce with external systems using **REST/SOAP APIs**. Skilled in **Apex callouts**, data transformations, and ensuring data integrity during integration processes.

Academic Intern

Persistent Systems Ltd

12/2021 - 05/2022

Pune

Achievements/Tasks

- Implemented new enhancements, including **custom object creation**, **field setup**, **workflow automation**, **email alert configuration**, **template design**, and UI enhancements
- Established relationships and junction objects** to facilitate **roll-up summary field** creation for aggregating data across records
- Designed and implemented multiple approval processes across various stages of application development

PERSONAL PROJECTS

Currency Converter App

- <https://harsh-domain-dev-ed.trailblaze.my.site.com/currency-converter>.
- Currency Converter** in LWC fetches real-time exchange rates from a third-party API. Users input amount and select currencies, and the component displays the converted amount instantly.

Weather App

- <https://harsh-domain-dev-ed.trailblaze.my.site.com/weather-app>.
- Weather App** in Salesforce uses an **Apex callout** to fetch real-time weather data from an external API based on the user's city input. The Apex class handles the API request and returns weather details to the LWC for display.

NoteTaking App

- <https://harsh-domain-dev-ed.trailblaze.my.site.com/note-taking-app>.
- Created a Salesforce note-taking app using LWC for the frontend, Apex for backend logic, and DML operations to save, retrieve, and manage notes in a custom object, enabling efficient note management.
